

+ LIGHTS

HPA 2000

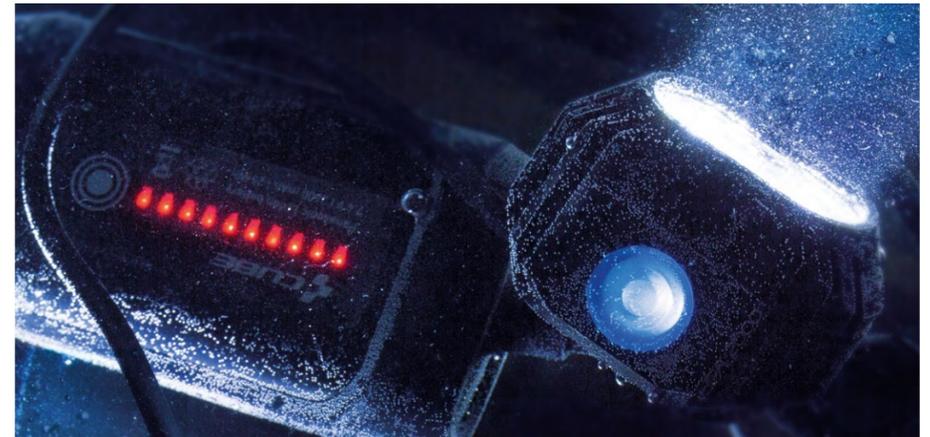

*Daniel Englbrecht,
Product Design*

We wanted to set new standards in lighting, so we created the HPA 2000 front light. Our main focus was on obtaining the perfect beam, so we set about creating a brand-new lens geometry. The compact size and low weight of this high-end light, combined with the accessories included with delivery, make it the perfect companion for a multitude of sports and won't leave you in the dark.

HIGHLIGHTS

T E C H N O L O G Y

+ YOUR MULTI-SPORT COMPANION THAT TURNS NIGHT INTO DAY.

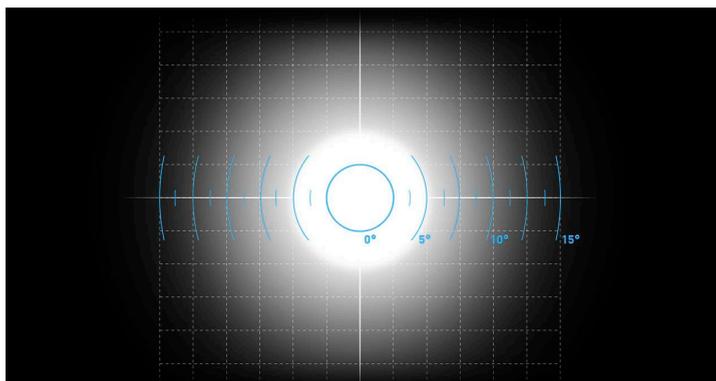

An after-work loop through the Kösseine massif. Just a quick climb up to the summit followed by one or two drinks, and it's dark already. I snap the HPA 2000 on to my helmet, quickly check the battery status and head out into the dark night. One click of the remote control switches the light into high-power mode, ideal for higher speeds. The trail snakes through the trees, it's chilly but perfectly lit. The beam from the light follows as I glance over the last root section and then we're at the bottom already, back in civilisation.

+ **OUTDOOR SERIES**
LIGHTS WITHOUT LIMITS.

Our trip through the mountains does not go to plan. Two punctures later, the clouds start to close in and the light fades. Nightfall stops for no cyclist and we still have plenty of kilometres of winding descents ahead of us. But it's no problem with the right lights to hand. Our group flies through the countryside and shreds root trails in the dark. We're unstoppable! The perfect beam turns night into day and lets us stay riding for longer.

OUTDOOR LIGHTS

The Outdoor Series is characterised by extremely powerful lighting. This is achieved by using specially developed lenses for maximum visibility.
